

# Patient Information:

**Name:** Ali

**Date of Birth:** 06/22/1999

**Patient ID:** 10024561

**Date of Report:** 04/12/2024

**Referring Physician:** Dr. Rana Khalil, MD

**Specialty:** Orthopedics

**Contact Information:** [Physician's Contact Information]

## Introduction:

This medical report is prepared for Ali following his consultation and clinical evaluation in the orthopedic department on 04/10/2024. The purpose of this report is to assess his musculoskeletal condition and provide a recommended treatment plan.

## Medical History:

Ali has no chronic medical conditions. He reports a previous sports-related knee injury two years ago that resolved with physiotherapy. He has no known allergies and does not take regular medication. He is physically active and exercises regularly.

## Presenting Complaints:

Ali presented with persistent lower back pain radiating to the left leg, especially after prolonged sitting. He reports stiffness in the morning and discomfort during heavy lifting.

## Diagnostic Tests Conducted:

- Lumbar spine X-ray
- Physical mobility and flexibility assessment
